PROFESSIONAL PROFILE

I am a macroeconomist whose research focuses on macro-financial stability and the design of monetary policy frameworks in emerging and developing economies. I deploy structural models and empirical methods to investigate how macro-financial linkages, fiscal-monetary mix, and financial intermediation jointly shape business cycles, asset pricing, and systemic risk. With a strong quantitative foundation, My objective is to contribute to the development of coherent policy frameworks that enhance financial resilience, strengthen fiscal-monetary coordination, and foster sustainable and inclusive growth. Drawing on practical banking experience in credit and risk analysis, I have the ability to distill complex economic analysis into actionable intelligence for senior policymakers.
